About Max Planck Society

Max Planck Society for the Advancement of Science is an independent, non-profit research organisation that primarily promotes and support basic research at it own institutions.

- 80 Institutes grouped in 3 sections
 - Chemistry, Physics and Technology
 - Biology and Medicine
 - Humanities
- Budget
 - 1,5 billion EUR
- Personnel
 - 13.300 staff
 - 4.800 scientists

Max Planck Digital Library (MPDL)

- The MPDL is a scientific service unit within the Max Planck Society, established in January 2007.
- The MPDL provides services to help the MPS researchers manage their scientific information workflow. Such services comprise the provision of actual content and of technical solutions (i.e. institutional repository), but also the support to users by acting as a centre of competence and community facilitator in the domain of scientific information management.
- **A substantial task of the MPDL is fostering the Open Access policy of the Max Planck Society.**
-> **Open Access Policy Team**

MPDL: Basic Information Provision

- „Basic provision“ = MPS-wide licensees for electronic resources
- Organized by Max Planck Digital Library
- Basic provision was introduced in 1999 by decision of the MPS Sections.
- Each MPI pays a fixed percentage of its whole budget into a central fund.
 - Since 2004 the following percentages apply:
 - Institutes in BMS 0.9%
 - Institutes in CPT 0.9%
 - Institutes in GSHS 0.3%
- In 2003 it was decided to switch to e-only subscriptions for journals.

MPS OA Policy: Commitment

- *„publication on principle of results obtained through public funding (principle of the public availability of the results of basic research) ...“*
Rules of Good Scientific Practice (24 November 2000)
- *"The MPS is a non-profit organization, which is largely financed by federal and state grants. The research results are public property that should be applied for the benefit of the general public.,,*
Guidelines for Knowledge and Technology Transfer (August 2002)
- *“Open Access
Description of the activities making results permanently freely available, i.e. MPS institutional repository, open access selfarchiving, open access journals etc.“*
MPG: Rules for Reports to Scientific Advisory Boards (April 2009)

MPS Open Access Policy: Advocacy

Berlin Declaration on Open Access to Knowledge in the Sciences and Humanities

The Internet has fundamentally changed the practical and economic realities of distributing scientific knowledge and cultural heritage. For the first time ever, the Internet now offers the chance to constitute a global and interactive representation of human knowledge, including cultural heritage and the guarantee of worldwide access. ...

Dec. 2-4, 2009, Paris
<http://www.berlin7.org>

MPS Open Access Policy: Advocacy

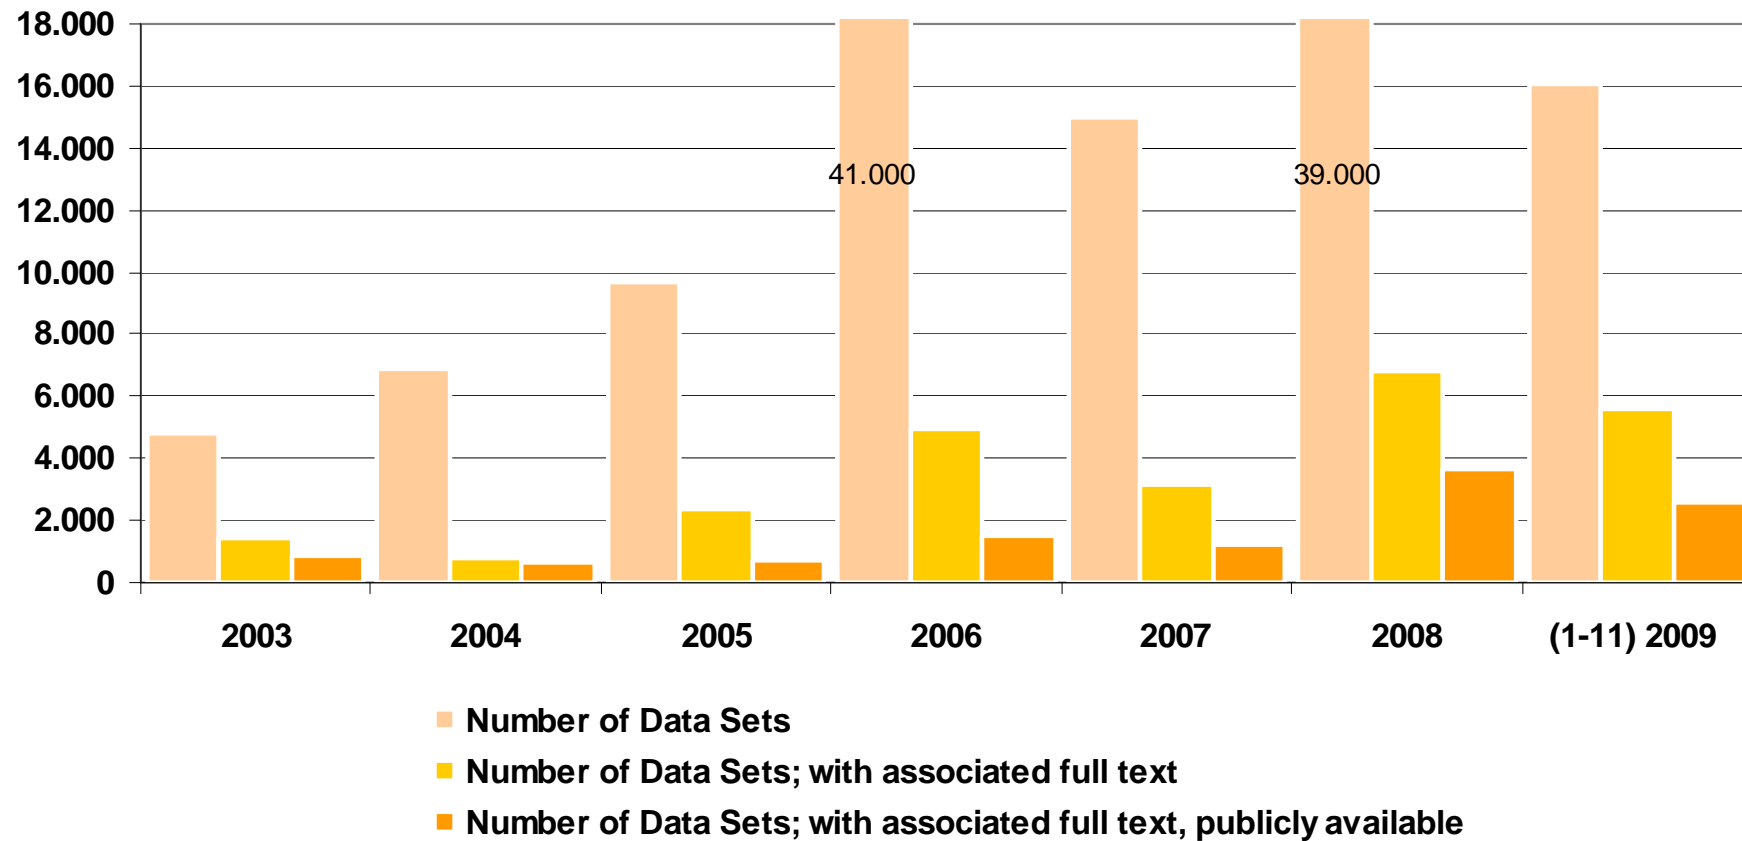

Signatories Berlin Declaration (02.11.2009)

MPS OA Policy: Green Road

- Objective:
 - Capturing and displaying entire MPS research output
 - Enrichment with high-quality metadata
- Actions:
 - Establishing “deposit request”
 - Development of an archiving system: PubMan
 - Following national/international initiatives & standards (e.g. DINI; DRIVER)
 - Development of model workflows
 - Assessment of rights situation of past publications
 - Advising researchers during the publication process

MPS OA Policy: Green Road - eDoc / PubMan

Ranked first among the German open access repositories by *OpenDOAR*

MPS OA Policy: Golden Road

- Objective:
 - Experimenting in cooperation with publishers new cost models (e.g. shifting cost from reader to author)
- Actions:
 - Unifying and consolidating the budgets for subscribing to information resources
 - Concluding article charge agreements
 - Cooperating with publishers
- Examples:
 - BioMed Central, PLoS, New Journal of Physics, Copernicus Publications, Springer
 - SCOAP³ (Sponsoring consortium for OA Publishing in Particle Physics)
- Provision of an innovative publication platform
 - Living Reviews

MPS OA Policy: Springer Pilot

- 'Pilot Contract' since January 01, 2008 (2 year extension about to be concluded)

Springer

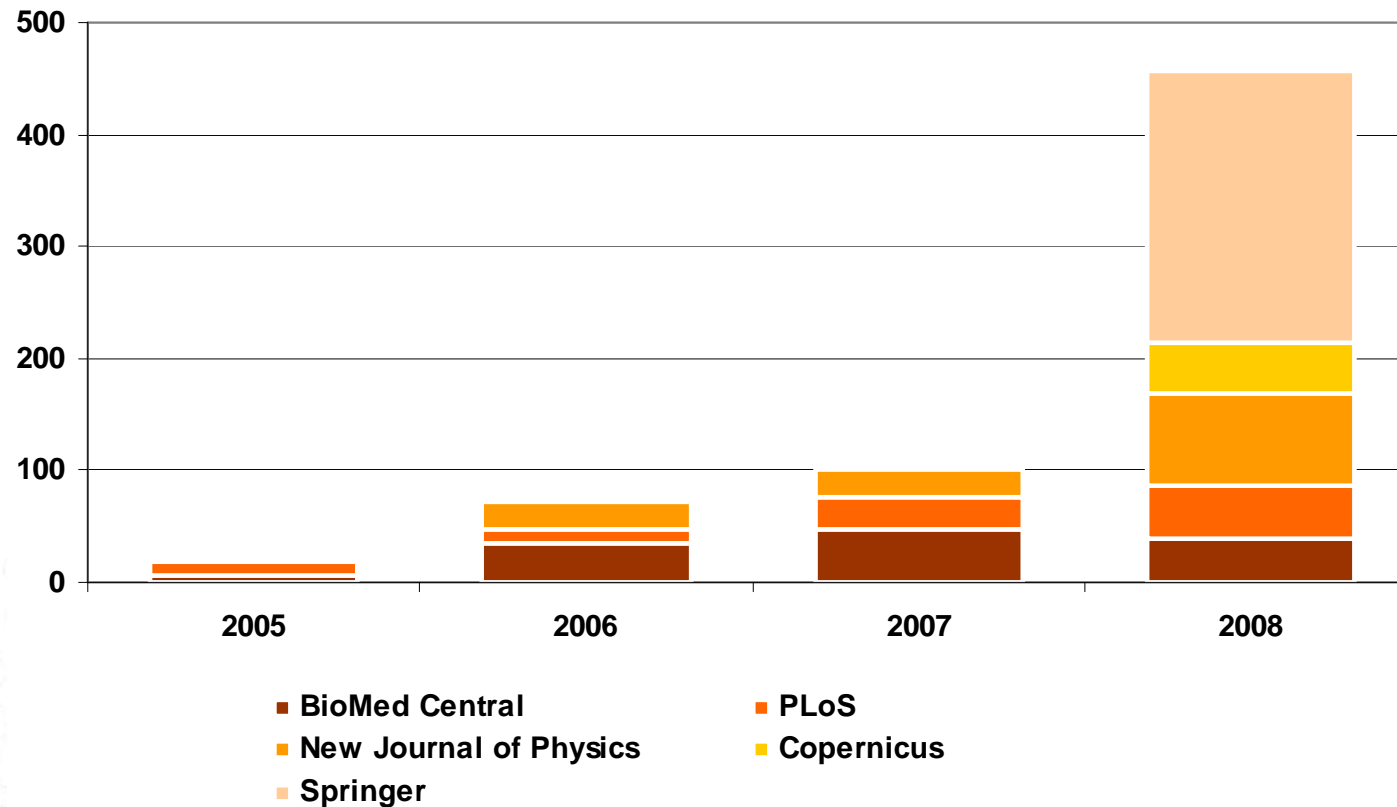

science+business media

- All publications by authors (1) from Max Planck Society as Open Choice (2)
 - All fees already included in the subscription contract
1. Not limited to the corresponding author!
 2. Open Choice = content accessible to all readers, without restriction in time

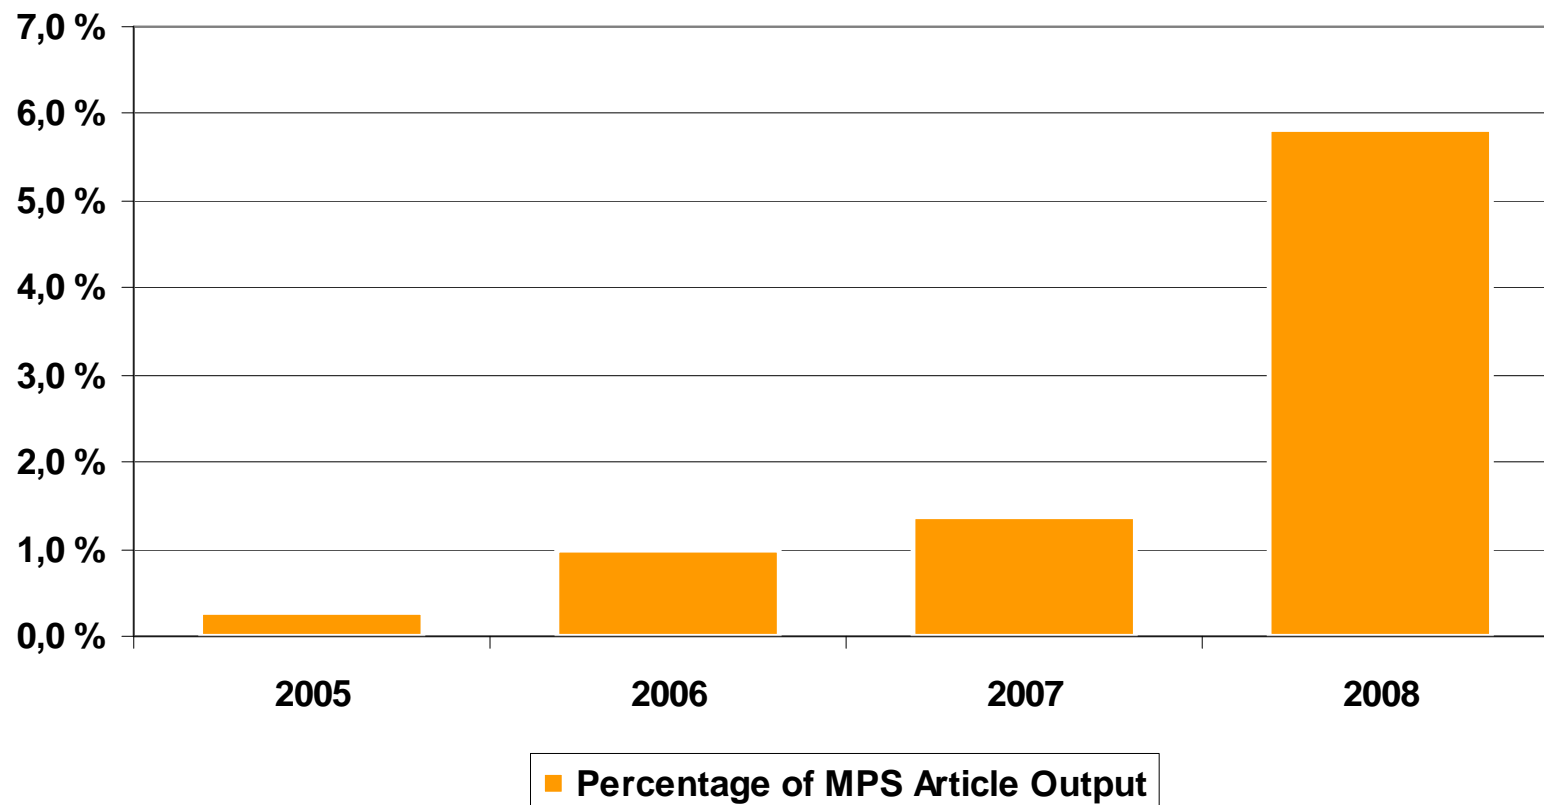

MPS OA Policy: Golden Road

"Equipping scientists and scholars with the information infrastructure best suited to meeting their research needs is the guiding principle of this priority initiative."

Excerpt from "Priority Initiative Digital Information - Guiding Principles"

With the Priority Initiative "Digital Information" the Alexander von Humboldt Foundation, the Deutsche Forschungsgemeinschaft (DFG, German Research Foundation), the Fraunhofer-Gesellschaft, the German Academic Exchange Service (DAAD), the German Rectors' Conference (Hochschulrektorenkonferenz - HRK), the Helmholtz Association, the Leibniz Association, the Max Planck Society and the Wissenschaftsrat (German Council of Science and Humanities) have agreed to coordinate their activities and to expand on the ideal of the innovative information environment by means of a Joint Priority Initiative from 2008 to 2012 with the following goals:

- to guarantee the broadest possible access to digital publications, digital data and other source materials
- to utilise digital media to create the ideal conditions for the distribution and reception of publications related to German research
- to ensure the long-term availability of the digital media and contents that have been acquired from around the world and their integration in the digital research environment
- to support collaborative research by means of innovative information technologies.

Welcome to the information platform open-access.net!

The open-access.net platform aims to meet the growing demand for information on the subject of Open Access (OA). Our editorial team gathers information which is scattered across many sources and bundles it thematically for presentation to various target groups.

Since we wish to progressively expand and optimise open-access.net in response to user needs and feedback, we welcome your input. So please don't hesitate to send us an [E-Mail](#) if you have any questions, comments or suggestions.

You are also welcome to participate in the current debate on OA by joining our experts forum which takes the form of a moderated mailing list.

[Register for our mailing list](#)

Open Access Days

The [third Open Access Days](#) took place at the University of Konstanz on 7 and 8 October 2009. The [conference programme](#) is online. If you would like to be kept informed automatically about past or future Open Access Days, you may sign up for the [Open Access Days mailing list](#) established for this purpose.

Current debate on Open Access and copyright

An intense debate has been taking place in the German media in recent weeks on the subject of Open Access, Google Book Search and copyright. It culminated in the so-called Heidelberg Appeal. A [brief overview](#) of the debate is available on [open-access.net](#). It includes a collection of links to key statements and commentaries. If you have any more suggestions or addenda, please [contact us](#).

OA Germany- Collaborations: German Initiative for Network Information (DINI)

DEUTSCHE INITIATIVE
FÜR NETZWERKINFORMATION E.V.

[DINI / English / Working Groups / Elektronisches Publizieren](#)

Electronic Publishing

The workgroup "Elektronisches Publizieren" supports the electronic publishing at German universities by the development of recommendations for document- and publication services and through the organization of training courses, meetings and discussions on the topic. Since 2003 the workgroup EPUB assigns a certificate for documents- and publication services in a standardized process. That isto support universities, colleges and research facilities to implement a minimum standard for building up an institutional repository. In addition to the certificate advice and support for operators of document- and publication services, we develop qualified services for our DINI projects. Our main activities and the group of service compatible services are mainly with the election of different ways and user-workshops. Furthermore this DINI workgroup assists in the information exchange with the international OAI community and the development of OAI-based services. DINI supports the constitution of a national network of certified Open Access repositories as a component of a European research infrastructure, that will be implemented within the scope of the EU-project DRIVER. Besides the mentioned key aspects DINI also engages for implementation of the intentions of the Open Access movement. In this case DINI cooperates with the information platform "open-access.net". Other aspects of the work of the group are the alternative and additional approaches for impact-measurement scientific publications based on utilisation data. Here there exists a close exchange with the LIBER Access Division and the Research Library of the Los Alamos National Laboratory.

Preliminary Remarks

The answer to the question 'How accessible are knowledge and information?' will determine the opportunities for education and development open to every citizen in the information society and the opportunities future generations will have to build on existing knowledge. The legal provisions set out in German copyright law will determine whether open, networked communications structures will continue to develop in our society in the long term. They will also affect the quality of our education system, the inventiveness of the sciences and the innovative capacity of trade and industry. In a global, competitive environment, they play a vital role in promoting social, cultural and economic development and hence in securing the future of our society.

With regard to the implementation of Directive 2001/29/EC in Germany, the legislature has so far mainly addressed the concerns of rightholders regarding the commercial use of digital media and networks as additional distribution channels. The prime concern here has been to minimise the risks related to private copying rather than to encourage exploiting the opportunities afforded by the new technical media to the public at large. The latter point is particularly important for the fields of education and science, because it is here that the information society contains new potential for imparting knowledge and promoting co-operation between scientists. The way these new opportunities are used is a decisive competitive factor on the global stage.

We, the undersigned, undertake to ensure that the full potential of the digital media and communications systems remain open for use by the general public and, in particular, by science, and that these media and systems are not subject to restrictions which primarily serve the commercialisation of information by the private sector.

In a digitised and networked information society, access to global information for the purposes of education and science must be guaranteed at all times from any place.

[Max Planck Society eDoc Server](#)

Organisation: [Max Planck Gesellschaft](#) (MPG), Germany

Description: This is an institutional repository providing access to the scholarly output of the Max Planck institutes. A considerable portion of material on this site is bibliographic in nature, and does not accompany the full-text in an Openly Accessible format. However, the size figure listed here reflects the quantity of full-text Open Access material actually available. As material is reviewed by eDoc managers before being made publicly visible, some portion of the Open Access documents are restricted to local access only for a time. The site interface is available in English or German and is well supported with background documentation and guidance materials in both languages.

Im Rahmen dieses von der DFG geförderten Projektes sollen die an zahlreichen deutschen Hochschulen und wissenschaftlichen Einrichtungen vorhandenen Informationen zu Möglichkeiten der zusätzlichen Bereitstellung von bereits in einem Verlag veröffentlichten oder noch zu veröffentlichenden wissenschaftlichen Arbeiten (self-archiving von Preprints bzw. Postprints) erfasst, strukturiert, aufbereitet und im Rahmen des internationalen Informationssystems der SHERPA/ROMEO-Liste zugänglich gemacht werden.

Hierzu werden die Ergebnisse der SHERPA/ROMEO-Liste national bekannt gemacht, Handreichungen für die Kommunikation mit Verlagen ggf. übersetzt und Hilfestellung bei der lokalen Erfassung gegeben. Die Informationen zur Open Access Politik der Verlage sollen letzten Endes dezentral von den einzelnen Hochschulen erfasst und gepflegt werden.

Ziel des Projektes ist es,

- die dezentral vorliegenden Informationen zur Verlagspolitik bezüglich der freien Zugänglichkeit von Pre- und Postprints zu erfassen und zu bündeln,
- die Ergebnisse der SHERPA/ROMEO-Liste in Deutschland bekannt zu machen und auf die vorliegenden Informationen anzuwenden,
- die wissenschaftlichen Einrichtungen und Hochschulen dazu befähigen, die Informationen in

OA Germany- Policies: Mandates

- There are no hard mandates for open access publishing
 - Constitutionally guaranteed academic freedom
 - work contracts of research organization regularly do not include a 'work made for hire' clause
- Federal Law obliging researcher employed by publicly funded research organization of offer register patents on behalf of their employer
- An open access mandate could be developed based on this model

OA Germany- Policies: Funding

- The German Research Foundation is continuously funding Open Access via a number of programs:
 - Built-up and cross-linking of repositories
 - Long-term archiving of digital publications
 - Budget for article processing charges

CARPET project aims to support the efficient use of electronic tools and services for scientific publishing. In view of international developments in this field, the following will be carried out for Germany initially:

- a survey on existing publication tools will be presented in the form of a catalogue,
- a compass will be developed for analysis so as to determine a system and structure,
- a collaboration platform will be developed and made available.
- guidelines for standards and interoperability will be drawn up and
- a virtual competence center will be established.
