The library OPAC meets Web 2.0!

About Features Events Downloads Documentation Roadmap Support

VuFind is a library resource portal designed and developed for libraries by libraries. The goal of VuFind is to enable your users to search and browse through all of your library's resources by replacing the traditional OPAC to include:

- Catalog Records
- Locally Cached Journals
- Digital Library Items
- Institutional Repository
- Institutional Bibliography
- Other Library Collections and Resources

VuFind is completely modular so you can implement just the basic system, or all of the components. And since it's open source, you can modify the modules to best fit your need or you can add new modules to extend your resource offerings.

Getting Started

Type some keywords, an author's name, or even a full title in the search box above, optionally limit your search to just the catalog or online articles, then click "Search." Once you've settled on either a catalog or article search, you can filter results by author, publication period, and more. Need to craft a complex search? Choose an advanced search option to the right of the search box.

The Summon™ Service

True Web-Scale Discovery: Full-Breadth of Library Content - Easy & Fast.

Your library, with a single starting point.

The Summon™ web-scale discovery service enables a familiar web-searching experience of the full breadth of content found in library collections—from books and videos to e-resources such as articles. It goes beyond federated search, beyond next-generation catalogs to create an all-new service for libraries.

Through one simple search to a single unified index, the Summon service provides instant access to the breadth of authoritative content that's the hallmark of great libraries. No need to broadcast searches to other databases —it provides one search box for a researcher to enter any terms they want and quickly get credible results in one relevancy ranked-list.

Librarians like the service's power to transform their institution's search experience, and have found it easy to set up and integrate into their current library operations.

Content types include: library catalog records, e-journal articles, databases, newspaper articles, e-books, dissertations, institutional repositories, conference proceedings, grey literature, cited references, reports, digital library, more.
