Association of European Research Libraries

The role of research libraries in a European e-science environment

Wouter Schallier
LIBER Executive Director

About LIBER

- www.libereurope.eu
- The largest network of European research/academic libraries: 400 institutions, from over 40 countries
- **Mission**: to represent and promote the interests of European research/academic libraries, and of their users: students and researchers

What is E-science?

- Research that requires/is
 - Large scale computing resources
 - Data-intensive
 - Carried out over the internet
 - Collaborative (team science, virtual science communities)
 - Distributed (networked science)
 - Interdisciplinary
 - Heterogeneous

It's all about LARGE amounts of data

- “Data are no longer considered as interim products to be discarded once the research reporting them is published. Rather, they have become **important sources of scholarly content to be used and re-used.**”

(Borgman, The role of libraries in e-science)

Ex. Hubble telescope, CERN Large Hadron Collider etc.

Sharing data = publishing

- Documents:
 - Formal: books, journal articles, proceedings etc.
 - Gray literature: reports, working papers etc.
 - Websites, blogs, wiki's, tweets etc.
- Primary/raw data:
 - result of observation, experimentation, calculation etc.
- And all mixtures of these

Example: conference

- PPT's
- Abstracts
- Biographies
- Podcasts
- Interviews
- Reports of break out sessions
- ...
- Full text papers

Why now?

- E-science is already a reality but we can do more
- Internet, global connectivity
- Data deluge, data collection, data mining
- New and cheap means to share, distribute and publish information quickly
- More efficient use of technology in R&E essential for **European knowledge economy**
- **Time of crisis = time of opportunities**

The paradox of e-science

- Race against the time: the new generations are arriving at the university

Vs.

- Cultural change: how do you make researchers share data?
 - How do you make funding agencies reward collaboration and sharing data?
 - Current copyright/IPR rules are hindrance for e-science

Incentives for sharing data

- There is no other way
- Collaboration is a necessity
- Gives visibility and recognition

Europe's vision

- “Digital Europe – a vision for the next 5 years”: 4 priorities:
 - Easy access to digital content (“modern copyright and IPR rules are essential for the development of attractive digital content”)
 - Safe and consumer-friendly space for mobile payments
 - Digital economy open to small businesses
 - Innovative ICT solutions for low-carbon economy
- (V. Reding, Brussels, 9 July 2009)

European e-science infrastructures

- EC E-infrastructures Concertation and Consultation Meeting, Brussels 12-13 October 2009 (<http://www.beliefproject.org>):
 - GEANT (backbone for European data networking)
 - Sharing computational resources (e-science grid, supercomputing)
 - Global virtual research communities
 - Scientific data
 - Simulation and visualisation

The role of OA

- Essential
- Results of publicly funded research should be available in public domain
- Allows verification and replication of findings
- Stimulates international competition based on excellence

Data management issues

- Ubiquitous, trusted and easy access to (discovery of) research data
- Integrity
- Version management
- Semantics: how to interpret data?
- Ownership of data
- Long term preservation
- Visualisation

Data management issues (2)

- Licensing
- Technology and sustainable infrastructure (funding!)
- Repositories
- Use and re-use
- HR: data managers
- “Data repositories may become the new special collections for research libraries” (Borgman)

Into the workflow of R&E!

- Kill the library as book and journal store!
- Integration of library services in virtual research and education environments
- Support to data producers
- Recruitment of content
- Digital repositories: data!
- Enhanced publications: annotations, recommendations, primary data, podcasts etc.

Re-invent the library

- Observe the angry young (wo)men
- They ALL deal with information/data!
- How do they:
 - Access
 - Disseminate
 - Preserve
 - Legitimise **CONTENT**

New strategies

- E-science requires
 - New strategies for research support
 - New infrastructures
 - Integration in scholarly workflows
 - Skilled library professionals

LIBER events 2010

- Annual Conference “Re-inventing the library. The challenges of the new information environment”, 29 June-2 July 2010
- “Books and reading in the digital age”. 5-6 July 2010 (to be confirmed)
