

Web 2.0 and Libraries in the 21st Century

Caroline Kerbyson

Cambridge University Press

CAMBRIDGE
UNIVERSITY PRESS

- Web 2.0
- How this benefits the academic community
- Tools for academia

What is Web 2.0

- Web 2.0 sites allow user interaction
- Change in the way developers and users interact with the web
- “Users Add Value”

Web 2.0 in the academic community

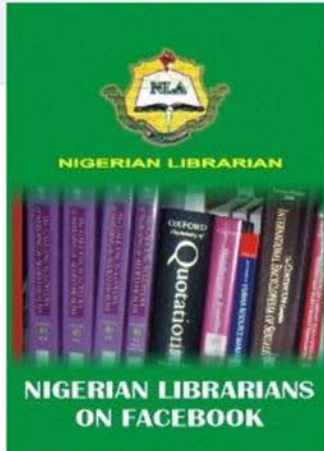

- Development of a community of academic interaction
- Social networking at the centre of interaction
- Increase in number of tools for researchers

Social Networking Sites

- Free
- Another channel to disseminate knowledge
- No hosting requirement
- Consistent format – users know how to use it
- Easy to build up a community
- Shorter download time
- Ready to use tools

In the current study, the putative cDNA for PnTx2-6 toxin of the *Phoneutria nigriventer* spider venom was cloned and expressed as dioxetoxin fusion protein in the cytoplasm of *Escherichia coli*. The bacterial extracts by combination of immobilized Ni-ion affinity and gel filtration chromatographies. Then, it was cleaved by enterokinase and the generated recombinant PnTx2-6 (rPnTx2-6) was purified by HPLC. Likewise the native toxin purified from the spider venom, rPnTx2-6 potentiates the erectile function when injected in rats. This result indicates that the production of functional recombinant PnTx2-6 is possible.

[First report on the occurrence of microcystins in planktonic cyanobacteria from Central Mexico](#)

Publication year: 2010

Source: Toxicon, In Press, Accepted Manuscript, Available online 24 April 2010

Vasconcelos, Vitor , Martins, António , Vale, Micaela , Antunes, Agostinho , Azevedo, Joana , ...

Although toxic cyanobacteria are commonly described worldwide, only one recent paper on the toxicity of cyanobacteria in Mexico has been published reporting the occurrence of cylindrospermopsin, the most commonly studied cyanotoxins in many countries and those that may cause the most dramatic problems in terms of human health. In this paper, we studied the occurrence of potentially toxic cyanobacteria in Central Mexico. Samples were collected in natural lakes (Zumpango, Laguna Atonilco and Cienega Chica), reservoirs (Los Angeles and Valle de Bravo), man-made channels (Cuevas de Chapultepec). A multi-technique approach was...

[Antifungal effects of the bioactive compounds enniatins A, A1, B, B1](#)

Publication year: 2010

Source: Toxicon, In Press, Accepted Manuscript, Available online 24 April 2010

G., Meca , J.M., Soriano , A., Gaspari , A., Ritieni , A., Moretti , ...

To produce enniatins (ENs), *Fusarium tricinctum* CECT 20150 was grown in a liquid medium of potato (PDB), being this mycotoxin purified by high performance liquid chromatography (HPLC) with column using a mobile phase of acetonitrile/water using gradient condition. The purity of the ENs fractions was verified by analytical HPLC and LC/MS-MS. The pure fractions of ENs were utilized to evaluate the antifungal activity against several mycotoxigenic moulds as *Fusarium verticillioides*, *F. sporotrichioides*, *F. tricinctum*, *F. poae*, *F. oxysporum*, *F. proliferatum*, *Beauveria bassiana*, *Trichoderma harzianum*, *Aspergillus flavus*, *Aspergillus ochraceus* and *Penicillium expansum*. The results obtained...

[Structure-function studies of Tityus serrulatus Hypotensin-I \(TsHpt-I\): a new agonist of B2 kinin receptor](#)

Publication year: 2010

Source: Toxicon, In Press, Accepted Manuscript, Available online 22 April 2010

Thiago, Verano-Braga , Flávia, Figueiredo-Rezende , Marcella N., Melo , Roberto Q., Lautner , Enéas R.M., Gomes , ...

In order to better understand the relationship between the primary structure of TsHpt-I – a bradykinin-potentiating peptide (BPP) isolated from the venom of the yellow scorpion *Tityus serrulatus*, to the conservative Pro-Pro doublet – and its cardiovascular effects, a series of ladder peptides were synthesized using the C-terminal portion of TsHpt-I as a template. All synthetic peptides having the Pro-Pro doublet were able to potentiate the hypotensive effect of bradykinin. Conversely, only those analogues having Lys residue could induce a transient hypotension when intravenously administered.

Robot Extends Library Services

[BranchAnywhere](#), an automated library material vending system, was launched at the Public Library Association Conference (23 – 27 March 2010) in Portland, Oregon.

This system "allows libraries to provide books and audiovisual materials in convenient locations without the space and cost associated with constructing a traditional library branch or building."

Current Library News

Library 24/7: Between Saturday 24 April and Friday 4 June, the Main Library and Queen's Campus Library will be open 24 hours a day, 7 days a week.

From the beginning of the Easter term to the end of the exam period, the Main Library and Queen's Campus Library will be offering 24 hour access for the first time. In response to feedback from the National Student Survey and following analysis of opening hours in operation at other university libraries around the country, we have decided to trial maximum opening hours at the main Library sites for each campus. We will be monitoring the use of 24 hour facilities throughout this period and statistics and feedback collected will be used to help inform future decisions about changes to Library opening hours.

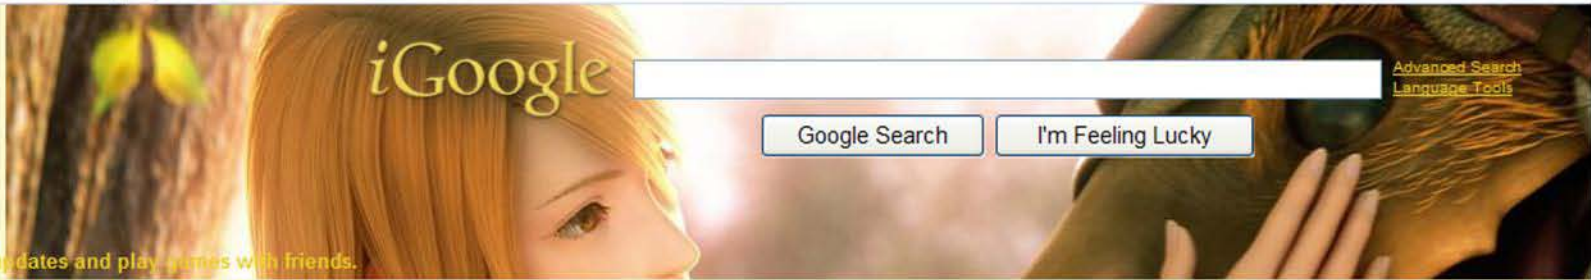

For more information, details of services available at different times throughout the 24 hour period, and to share your feedback please visit <http://www.dur.ac.uk/library/247> (21 Apr 2010)

The future...Web 3.0?

- Devices will be able to interpret the way the web is written
- Focus will be on the individual
- More intelligent retrieval of search results based on information stored about the user
- Information easier to retrieve with advanced mash-ups

In conclusion...

- Web 2.0 offers many tools to assist researchers
- Community aids discussion
- Sharing of social media aids awareness
- Increases research support

- Thanks for listening!
- Contact me if you would like a copy of this presentation
ckerbyson@cambridge.org
