Abstract: The functional efficiency of an institution of higher education depends on the size of the available resources and their efficient use, which is expressed using corresponding indicators e.g. the duration of study. Therefore, there is a need of using new and intelligent models and tools to control and evaluate the educational work. Such models give an emphasis in the processes of developing criteria, techniques, and indicators, and facilitate measurement and performance’s investigation. Recent research showed that Balanced Scorecard gained preferences of the administration of Educational Institutions. This paper presents a discussion of basic elements in a balanced target setting in the area of Higher Education.

I. INTRODUCTION

In today’s world, where knowledge and quality are considered as critical factors in the global economy, Higher Education Institutions (HEI) as knowledge centers and human resource developers play a crucial role. Strategic planning and management enables the Institutions to increase the adaptability with the environment and improve their performance. So, a well-informed strategic management will increase the overall quality of the services provided in the Institutions and Balanced Scorecard (BSC) can be considered as an appropriate strategic management tool for this purpose. In this direction, the decision makers and administrators will be able to organize the internal knowledge in order to support the mission of the institute, to control the outcome services and to design the outcome knowledge due to the needs of the society.

In our paper we describe how the application of the BSC methodology will enhance the quality in HEI and we present a case study regarding TEI of Athens (TEI-A). The paper is organized as follows: In the section II we present how the BSC strategic management enhances the quality in higher Educational Institutes. Section three presents the implementation of the BSC methodology to the TEI of Athens and finally the paper ends with a conclusion.

II. BSC STRATEGIC MANAGEMENT ENHANCE THE QUALITY IN HEI

The quality in a HEI can only be enhanced through a transparent, thorough and integrated evaluation, whose outcomes will be properly assessed and used by the administration of the institute. For the evaluation processes of HEIs, International/National Quality Assurance Agencies have set quality criteria that are correlated with specific indicators that measure the performance in all sectors of the education. Those indicators are called Key Performance Indicators (KPI) 0.

The Hellenic Quality Assurance Agency [2], which is responsible for the accreditation and evaluation of the Greek HEI, has suggested the following sectors for the classification of the quality criteria:

- Educational Program
- Learning
- Research
- Relationships with Social and Cultural events, with industry and Production
- Academic development strategy
- Administrative services and infrastructures

(Administrative services, student concern, transparency in the management of economic resources, etc.)

The Academic Evaluation is a difficult and complex task but also very important and difficult is the monitoring and utilization of the outcome of the evaluation processes. For this purpose, it is necessary for a HEI to employ strategic management methodologies and models that will facilitate measurement and performance’s investigation.

A. Strategic Management in HEI

Strategic management is a matter of mapping the route between the perceived present situation and the desired future situation. Well – formulated institutional policies that enhance the coordination and effective implementation of programs, projects and plans can support the administration taking the appropriate decisions for the educational development. Through strategic management, the vision, goals, tactics of the institute and strategies which fulfill its needs, will be integrated into a unified whole 0.

For the successful implementation of the goals set by the institute, appropriate tools must be determined and used. This paper is concerned with the BSC tool as a strategic management tool that supports linking strategy with operational initiatives.

B. Balanced Scorecard

Kaplan and Norton (1992) introduced balanced scorecard as a performance measurement tool for the first time. Till now many changes have been made to the physical design, application and the design processes used to implement the tool, that have enhanced the utility of balanced scorecard as a strategic management tool [53].

50 INTEGRATED INFORMATION
The typical BSC framework includes the following four perspectives:

Financial: encourages the identification of a few relevant high-level financial measures. In particular, designers are encouraged to choose measures that help in the formulation of an answer to the question "How do we see stakeholders?"

Customer: encourages the identification of measures that answer the question "How do customers see us?"

Internal Business Processes: encourages the identification of measures that answer the question "What must we excel at?"

Learning and Growth: encourages the identification of measures that answer the question "Can we continue to improve and create value?"

The finale purpose of BSC is to support managers by providing them all the factors for aligning the performance of the organisation with its strategy.

C. Applying BSC in HEI

The adaptation and application of BSC in an organisation has been described extensively. On the other hand, very little research has been conducted for its adaptation and application in the education context.

When a higher education institute wants to apply BSC, it should emphasize in academic measures than in financial performance. Thus, we considered as necessary to adapt the four typical perspectives of the BSC to those presented in the following figure (Figure 1). In this approach, the "financial perspective" is replaced by the "teaching and research work perspective" which refers to the highest possible quality of the supplied teaching and research work. The "customer perspective" is replaced by the "students and partners perspective" since they are considered as customers of the HEIs. The "internal processes perspectives" remains the same, while the fourth perspective "learning perspective" is replaced by the "human and financial resources perspective". This perspective refers to input and infrastructure elements of the scientific process of the institution 000.

D. The impact in the Quality Assurance Processes

Quality Assurance (QA) in a HEI refers to all processes, infrastructure, and personnel that are used in order to improve the quality of the education 0.

For the better description of the quality assurance processes, we can use the quality strategic map that shows the influence of the external factor to the procedures of a HEI and also the interactions between the management processes and the internal processes. Figure 2 presents the quality strategic map, which is proposed in a study by Kettunen & Kantola, where there is a linked series of objectives that are located in the four perspectives of the BSC framework and also includes a set of cause and effect relationships among the objectives.

Balanced scorecard – quality strategic map

By adopting this suggestion, a HEI, after defining the KPIs that are related to the quality criteria, can define its strategy based on the outcomes of the application of BSC which will present if the objectives set have been achieved. In particular, the management of the Quality Assurance Unit of an institute can monitor all performance indicators in order to support the administration of the institute in taking decisions for the improvement of the quality of the educational and operational processes and in setting its strategic objectives.

For this purpose, a tool for supporting the BSC methodology is considered as necessary for the better monitoring, measurement, and dynamic controlling of the institute performance. As such, we suggest ADOscore that offers a unique Management Portal to display information and aid decision making using actual company strategy and performance results 0.

Web-based management reports automatically generated by ADOscore and intuitive Controlling Cockpits with charts, trends, and traffic lights, deliver the right information at the right time (see Figure 3). With the usage of this tool, each user – role of the institute can select the sector he is interested in and continuously monitor the performance of the indicators of the evaluated sector. In this direction, the manager of
the Quality Assurance Unit of the institute can observe all performance indicators in order to support the administration of the institute taking decision for the improvement of the quality of the educational and operational processes and in setting its strategic objectives.

Further, one of the most important steps was to present the quality strategic map which shows the interactions between the strategic objectives as well as the quality criteria related to each one (see Figure 5).

III. The Case Study of TEI of Athens

In TEI of Athens, and specifically in the department of Informatics, a first attempt has been conducted to implement the BSC technic with the support of the ADOscore tool.

First it has been defined the vision and the strategic target of the department, and thus the institution’s. Then, and for each of the four adapted perspectives of the BSC, strategic objectives have been defined setting in addition the success factors that have to be achieved (see Figure 4).

What was missing for the accomplishment of this attempt was the definition of the specific indicators that are related to the quality criteria. In other words, the indicators could only be described theoretically without relating any measurable values. So, there was not possible to monitor, through the intuitive Controlling Cockpits of ADOscore tool, the existing situation and the grade of achieving the strategic objectives and the performance of the strategy in total.

IV. CONCLUSIONS

This paper represents how the application of the BSC methodology will enhance the quality in HEI and presents also an attempt to apply the balanced scorecard methodology in TEI of Athens (TEI-A).

This first attempt in TEI-A, showed that BSC is indeed an appropriate strategic management tool that will enhance the quality of a HEI. Its application will support the administration entities to observe all performance indicators and suggest solutions for the improvement of the quality of the educational and
operational processes especially when this application is supported be a tool for the better monitoring, measurement and dynamic controlling of the institute performance, like ADOscore.

As a further step concerning the implementation of BSC in TEI-A, we will try, within the project “MODIP of TEI of Athens”, to set the specific and measurable indicators and relate them with the quality criteria and strategic objectives of the institute. As basis for this attempt will be the evaluation model proposed by the Hellenic Quality Assurance Agency.

AKNOWLEDGEMENT

This paper is written within the project “MODIP of TEI of Athens” – NRSF 2007-2013.
